PAD seam: flat, robust, printable

The PAD seam, available exclusively from GKD, applies a new adhesion method and flat wire staples, making it extremely flat compared to conventional stapled seams. A special pad consisting of adhesive and an outer fabric inlay is melted into the mesh tape by hot melting and compressed with the staples. The flat seam makes it easier to slide scrapers, sludge spreaders and covers over the seam area. Seam damage is reduced. The seam is sealed more tightly and product seepage is reduced. The various PAD seam sizes, tailored to different sizes of mesh tape, set new standards of improved durability, stability and belt running behavior. The PAD can be printed in four colors with, for example, logo, bar code or part number. And, of course, GKD-PAD seams can be precisely reproduced.
